

Hence Action Potential

C₈H₁₁NO₃ is binding at the presynaptic nerve terminal where vesicles accelerate from the axon, goading calcium and merging to the membrane. Glutamate does jump the cleft towards receptor protein (commonly twelve nanometers) and I overhear cerebral compass tell the hypothalamus – pituitary – adrenals, *Its under lock and key.*

I insert pin; keyway to throating, rotate to bow and it opens!

Overriding said falterings and withdrawing to confusion, the meaning remains arcane. *But all in an education in not getting it, says psychoanalysis.*

Peripheral Vision

A compression deficit typically alters groups on the inner side of the optic tract and full force measures correct when read with hypoenhancement at spin-lattice.

Abrasion and atrophy (CNS) does direct haemorrhage and clearing chiasm at crossing, the rupture has sustained continuity, without spoiling, letting me look. So not stuck and weaning self off the need to hear, see, infer, then clambering up to widen.

Twelve by Nine by Ten

There is a waiting room in the Square Mile where Fatsia Japonica grow brawny and robust, in circles of foliage around banked grass. Above street level it's a portal to dissociation - it later spits me out somewhere near St Paul's or that school for boarding. Every time.

When I'm supine downstairs in the magnet room, the coldhead drum converts gas into liquid, it circulates a refrigerant that cools the heat of attraction. It is a familiar rhythm and pulse that imitates the ticking of a clock, but I am active and I cannot read the time.

The bore of an MRI scanner is also a tunnel. Like under a focusing hood, centered to the glabella, it measures me twelve by nine by ten, in millimetres. My synapses are plastic, while a discharge picks up speed through the column of nerves in my spinal canal. I move from being in my head, to being in my body, so the being in my head can be seen outside.

After agonists, when I want to provoke, I mimic my rewards. Stoned off a new bravado, desperate this prolactin does not leak.
